

GREEN CUT®

The new generation of mesh abrasives

sets new standards

- Available in most sizes
- Extremely robust mesh
- Grains from P40 to P220
- Special Velcro coating
- Silicon carbide

Technical data

GreenCut for Drywall and Plaster Sanding

The newly developed GreenCut mesh abrasive sets new standards in sanding performance, dust extraction and uniform sanding results. Thanks to the special structure of its carrier and the binding of the abrasive grains, GreenCut is also available in coarser grits like 40 and 60.

Its strong inherent rigidity guarantees uniform surface sanding. Its open carrier structure also enables dust-free sanding and prevents the sanding disc from clogging up.

GreenCut can be used with every long-neck sander on the market today.

GreenCut for floor treatment and maintenance

Thanks to its innovative structure, the GreenCut mesh abrasive can be directly used on one-disc and multi-disc-shuttle machines without the need for backing pads. This ensures a very effective and uniform sanding of wooden and parquet floors.

The innovative open structure of the grit carrier enables heavy-duty surfaces and over-processed wooden floors to be cleaned with ease.

The dust is simply sucked through the open structure of the abrasive, preventing any clogging of the sanding disc.
