# DUST-FREE

## P1 sanding system for a dust-free finish

- Irrespective of the machine, it fits on all electronically controlled angle sanders and angle polishers
- Allows dust-free work in any sanding position
- Perfect view of the work surface for exact sanding of edges
- Extremely high abrasive power compared to orbital and vibrating sanders

## APPLICATION AREAS

- Sands off varnishes, paints and wood
- Processes metals, synthetics and solid surface materials – from coarse grinding to a smooth surface
- Removes rust
- Polishes a vast range of materials combined with the useit®-Superfinishing Pads
- Thanks to the unique design of the backing pad, dust-free and high sanding performance is guaranteed - with optimal surface quality

## EXAMPLES

Removal of anti-fouling coatings from the hulls of ships is highly demanding in terms of work and safety. Paints which can be highly toxic are only removable with great effort and are a huge cost factor when subsequently cleaning the boat. The same applies to processing glass-fibre reinforced plastic for example.

**The P1 DUST-FREE sanding system allows this kind of work to be done within a very short time with almost no exposure to dust for people or the environment.**
