

# EFFECTIVE

## Reduce your labour costs by up to 90%!

The new generation of high-performance abrasives has arrived! With the *useit®-Superfinishing-Pads SG, SG2* and *SG3*, every material will have a perfect and high-quality surface. Results that are convincing!

Even sensitive and challenging materials can be outstandingly processed and finished to a high quality level. The Superfinishing-Pad gives you a much higher performance for fine sanding and polishing. Its handling compared to traditional abrasives and polishes will convince you.

# READY FOR USE

## One product – unlimited possibilities!

The special structure of the pad's sandwich construction and the state-of-the-art production technology offers you globally unique processing of a vast range of materials using the Superfinishing-Pads. Solid surface materials such as Corian®, Varicor®, Wilsonart®, or GRP, paints, varnishes, acrylic glass and high-gloss lacquered surfaces can be specifically sanded in the shortest time possible and with a minimum of abrasive material use.

Even without pastes, uniform, matt or high-gloss surfaces can be created on non-ferrous metals and stainless steel in just a few processing stages. The Superfinishing-Pads also give you many options to individually process or finish materials such as varnished parquet, laminate or synthetic floors. Another focus of this product is also the use in the automotive industry for removing paint runs, dust inclusions, overspray effects or in Smart-Repair processes.

# COMPENSATED

## Smooth as glass – without changing pressure!

The Superfinishing-Pad SG3 carries on where other abrasives reach their limit, giving you the desired effect every time. Thanks to the unique multi-layered construction of the Superfinishing-Pad, variations in the pressure applied and irregularities on the work surface or the backing plate are perfectly evened out. Polishing, matt-finishing and refining almost any kind of surface is fast and simple and the process results in a surface quality which is second to none.

Dust inclusions and scratches can also be completely sanded or polished out by means of full surface or target spot processing – without damaging the surface of the workpiece.

For wet sanding, the thicker foam provides a high water-storage space so that the water can be dispensed in doses during processing. Sophisticated technology which makes lengthy sanding procedures a thing of the past!

# NEW & NEWER

## Recognise the difference!

The difference between the new SG3 and the well-known and reliable Superfinishing-Pads SG and SG2 is shown in the significantly thicker (6.5 mm) foam material which is particularly suitable for processing round and curved surfaces.

The adaptability is significantly higher and the danger of sanding through corrugations and edges is considerably reduced. Especially when using the SG3 in fine grit sizes, such as for removing overspray effects or polishing high-gloss lacquered surfaces, it demonstrates its special features.

Here, the abrasive grains used are adjusted to these particular application areas and to the current standard.

## Technical data

Bond:	Resin bond
Abrasive grain:	Silicon carbide
Grain distribution:	Special well-engineered coating
Colour:	Anthracite
Velour colour:	White
Grit:	180, 360, 500, 600, 1000, 2000, 2500, 3000, 4000

## Packaging units

Discs and hand pads, 20 pcs/PU

## Dimensions

Pads:	115x140 mm
Discs:	Ø 77 mm Ø 128 mm Ø 150 mm Other dimensions on request

# MADE-TO-MEASURE

## Reduce your warehousing costs!

Jöst abrasives® designed and constructed all Superfinishing-Pads to be used with all types of backing plates. A made-to-measure fit is guaranteed irrespective of the hole pattern and number of holes in the backing plates.

# FLEXIBLE & ADAPTABLE

## Delivery just in time!

Whether you require discs, pads, drums, belts or brushes – the Superfinishing-Pad is available in almost any shape and size and fits on all conventional sanders made by companies such as Bosch, AEG, Kress, Festo, Fein, Flex and many more.

Just ask us. We have the right solution, even for your specialised requirements – and that's a promise.
